

Technical Reference Sheet for PondCare® Simply-Clear

Purpose And Benefits:

Simply-Clear is a stable fast-acting bacteria that feeds on small-size organic materials that often cause cloudy water conditions. As the bacteria grow their outer coating acts as a natural flocculent clumping together fine particles. These fine particles then either drop to the bottom of the pond or are removed by the pond filter. The bacteria further consume these particles, further reducing the cause of cloudy water conditions. The bacteria in Simply Clear require phosphate and remove it from the pond water. Simply Clear bacteria will quickly clear pond water and digest and naturally eliminate the floating particles that cause water discoloration.

Directions For Use:

Shake well before using.

Initial Dose or Quick Clean-up: Add 2 oz (60 ml) per 250 US gallons (946 L) twice a week for two weeks.

Maintenance Dose: Add 1 oz (30 ml) per 250 US gallons (946 L) (1/2 cup per 1,000 US Gallons) every two weeks.

End of Season Dose: Add 2 oz (60 ml) per 250 US gallons (946 L) twice a week for two weeks.

Compatibility:

Simply-Clear can be used in all ornamental koi ponds and water gardens. Simply-Clear is formulated to work in both cold and warm water.

Accidental freezing of this product will not reduce its performance in the pond. In cold water (below 40°F) the activity of Simply-Clear, as with all bacterial products, will be reduced.

Sizes Available:

#248B – 16 oz (473 oz) treats up to 4,000 US gallons (15,140 L)

#248G – 32 oz (946 ml) treats 8,000 US gallons (30,280 L)

#248D – 64 oz (1.89 L) treats 16,000 US gallons (60,560 L)

#248C – 1 US Gal (3.78 L) treats 32,000 US gallons (121,120 L)
